

HIGH CONCENTRATE OUTDOOR CLEANER

KILL-PREVENT-STOP that **green** and black growth on outdoor surfaces

KEEP kleen

50% active ingredient = 500g/L

Suitable Surfaces: Suitable for use on almost any surface including concrete, asphalt, iron, aluminium, astroturf, wood, stucco, tiles, brick, paving stones, fabric, and many others.

1. **Directions**
2. **Coverage Rates**
3. **Pets**
4. **Moss in Lawns and Lichen growth on trees**
5. **Health & Safety**
6. **Spraying Roofs**

1. DIRECTIONS

CLEAN UP – 20:1 – Dilute concentrated product 20 parts water to 1 part Keep Kleen

MAINTENANCE – 40:1 – Dilute concentrated product 40 parts water to 1 part Keep Kleen

- Wet the surface with diluted mixture
- Just spray, walk away and forget
- Application rate of approx. 1.5L of diluted product per 10m²
- Repeat process every 6 months for the ultimate home maintenance solution
- For best results, apply Keep Kleen at least 12-24 hours before rain

2. COVERAGE RATES

2L: At 20:1 – covers approx. 270m², makes 40L of ready-to-use spray

At 40:1 – covers approx. 540m², makes 80L of ready-to-use spray

5L: At 20:1 – covers approx. 670m², makes 100L of ready-to-use spray

At 40:1 – covers approx. 1340m², makes 200L of ready-to-use spray

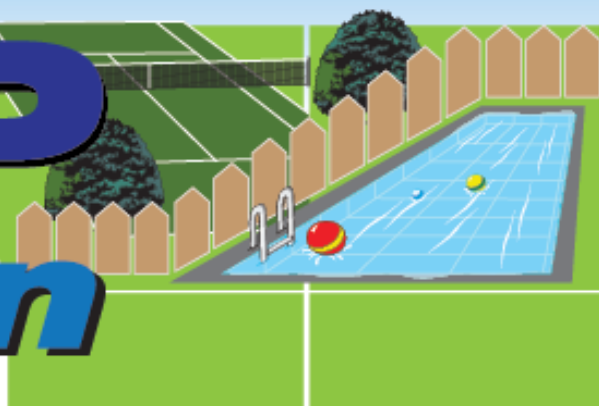

20L: At 20:1 – covers approx. 2680m², makes 400L of ready-to-use spray

At 40:1 – covers approx. 5360m², makes 800L of ready-to-use spray

3. PETS

If pets walk on a recently sprayed surface and then lick their paws, ingesting the product, this will result in a very sick pet. If your pet does walk on a recently sprayed surface, ensure to rinse their paws thoroughly with fresh water.

It is important to keep pets off sprayed surfaces until you have had 50mm plus of rain to wash any excess product off the surface. Even after drying of the sprayed product, light rain and subsequent pooling can present a problem to pets.

On flat surfaces such as a wooden deck or concrete path, a different approach to application will help reduce the pet problem.

- 1) Spray the diluted 20:1 Keep Kleen product onto the surface and keep the surface fully wet (misting if necessary) for 30 minutes to 1 hour. Keeping guard or cover to ensure no pets walk on the surface.
 - 2) Scrub the surface with a 'deck scrub' brush with hard short bristles
 - 3) Rinse off with tap water
- With uncoated wooden decks and porous concrete, a small portion of the Keep Kleen will remain in the surface and help prevent regrowth.

4. MOSS IN LAWNS & LICHEN GROWTH ON TREES

Dilute 40:1 – 40 parts water, to 1 part Keep Kleen. Spray only lightly to lessen damage to surrounding grass and reduce risk to pets. Repeat 3-6 monthly until fully removed.

5. HEALTH & SAFETY

Unlike some TV advertisements, always protect yourself when spraying and follow the guidelines for safety on the container.

The only thing that is supposed to enter your lungs is fresh air. When you are spraying ANY chemical, small amounts of the spray is atomised into the air and you will breathe the chemical into your lungs if you are not protected. Wear a dust/mist mask to protect your lungs. Also, protect your eyes with safety glasses – especially if spraying overhead. Use safety glasses that are tight fitting, preferably with a seal.

Safety Instructions are on the label, and Safety Data Sheet (SDS) is available on our website via the QR code on the packaging.

6. SPRAYING ROOFS

Roofs that are used for collecting drinking water should have the plumbing disconnected to prevent the product entering your drinking water system.

After spraying you will need at least 3 weeks and 50mm of rain before reconnection of rain water collection.

Roofs with a large amount of moss and lichen, allow at least 75mm of rain before reconnection of rain water collection.

A rain gauge can be purchased from rural farm supply stores such as Farmsource or Farmlands.

Ensure gutters are cleaned before reconnecting.

Preferably use a mesh screen or filter to prevent dislodged moss and lichen entering your water supply.

Large thick growths of lichen although killed by the spray, can remain on the roof until the material becomes softened by decay and a substantial downpour of rain with enough force washes the material free. This may take from 6 months to 1 year if the Lichen is well anchored to the roof. The lichen should change colour from a green, to a light brown in the first one to two months after application.

For best results, ensure you have at least 24 hours before it rains. The longer the better as Lichen is a very resilient growth and requires as much contact time with Keep Kleen as possible to achieve the best result.

Do NOT spray in the heat of a summer day as we want the roof to remain wetted as long as possible. After spraying the roof initially with a 100% coverage, repeat the process and spot spray areas that have large amounts of growth to fully wet out the surface.
